Vice President of Product Management at Adobe, Hugo Thyssen points out in his blog article that Adobe Photoshop Sketch is optimized for iPad pro and to extend it to other desktops is a “natural move” for the larger industry. In the future, Adobe plans to integrate the design and editing processes with its Creative Cloud suite. This would allow designers to create and deliver work quickly and painlessly to their clients or design partners. At least five months after the release of the iPad Pro, Adobe Photoshop Sketch continues to grow. The new Creative Cloud app allows you to quickly create new works and stay up to date with the latest features and updates. While it’s sad that the 2014 Mac Pro (as you know) initially left creative professionals holding the bag, at least that’s starting to change. Creative Cloud is an improvement on the Macintosh but it’s still a collection of desktop apps that are cloud-integrated and can’t grab video from a Mac mini, can’t sync with a Mac Pro (yet), and requires a PC or Mac to run. If you’re working on an iPad Pro it makes sense to use a real desktop computer for the rest of your desktop or design workflow. But if you’re working on an iPad Pro in bed, at a beachside café or at a friend’s house, you can use the same tools as your clients — whether they’re in a bed, on the couch or drinking coffee at a cafe. The Creative Cloud apps will be rolling out over time, which means there will be more efficiency in design workflow and a better experience awaiting designers when they’re not at their machines.

Adobe Photoshop CC has all the most popular features from Photoshop and includes all of Photoshop's major improvements and changes from 2015, like new, easy ways to work with 3D layers, ink and shape tools, and Camera Raw. It also adds new features that are designed to work like they did in the past, but better. There is a new, mobile-first interface, an easier way to open and save files, and an updated features library. Photoshop and Lightroom are the most widely used photography software tools. They are both critical to a photographer's workflow. They are essential software tools for any photographer capturing photos today. Photoshop's Content Aware fill replaces layers, enabling you to fill areas of your photo with an object from a different layer than the one you are working on. When an object moves, it can limit what you can do with the

selections it creates, while with fill, no matter how it moves, it will "know" whether to fill it or not. If you work with texture in Photoshop, you will find this a real time saver.
