CAD stands for Computer-aided Design, and it is a process of designing and creating a complex piece of engineering work using a computer, like a digital picture frame. CAD software is used by architects, engineers, drafters, and other designers, as well as by manufacturing and construction companies. AutoCAD 2019 is a free and easy to use software that allows you to create any type of drawings such as architectural and engineering drawings, mechanical drawings and more. AutoCAD is a complete suite that allows you to work on the computer and create the drawings. It is one of the most well known software in the world and its fame is the only thing that can be compared to Photoshop. The software has brought in many changes in the world of building and construction. History of AutoCAD The name AutoCAD is a portmanteau, combining the words “automated” and “drafting.” AutoCAD is the world’s first professional 2D drafting software. It was developed in 1982 by the AEC market leader, Autodesk, Inc., to meet the growing demand from architects and engineers to plan, model and document in 2D. AutoCAD was launched in December 1982 as a desktop app running on microcomputers with internal graphics controllers, and was the first product in the history of building design to be developed specifically for the desktop. Before AutoCAD, engineers and architects typically sketched their designs on paper, then converted them into computer-aided drawings. Since its introduction, AutoCAD has become one of the world’s most widely used 2D drafting tools. AutoCAD came to be a comprehensive solution for 2D drafting because it was invented to solve a specific problem: how to transfer a line-by-line drawing from paper to the computer. The evolution of AutoCAD In the beginning, AutoCAD was nothing more than a few workbooks with files. It had no commands and was solely focused on the simple task of creating a drawing file. As AutoCAD grew, it began to include many powerful features and automated functions. Over the past few years, AutoCAD has developed a tremendous scope. It has gone from a basic drawing program to a complete and functional product that integrates 3D modeling, surface design, and other integrated tools. The latest version, AutoCAD 2019, includes features such as large format display, 3D

He says that Israel has told him that the Iranians have been working on a "race car" with uranium. He also says that Israel has told him that Iran is a very big threat. These are the two largest countries on earth. How can the Secretary of State claim that Iran is even trying to build a "race car"? Why can't Israel tell him exactly what they are trying to build?
