AutoCAD 2016 is different from previous versions in several ways, including: There are two applications: one for drafting, and one for visualizing and editing BIM models. BIM models are designed and edited with the use of a new 2D viewport in the 3D interface. The 2D viewport allows editing of the BIM model in the format of a traditional 2D drawing. This new viewport was renamed BIM Viewport from 2D Viewport. A new 3D drawing interface was added, which is a modified version of the old 3D interface. Data is stored using BIM standards such as the Unified Modeling Language (UML), which allows information to be shared between 2D and 3D drawings and construction documents. The display options in the drawing window and properties inspector have been enhanced. A BIM workflow for AutoCAD users has been added which automatically exports the data to a standard format. Users can then import the BIM data into other software.
