AutoCAD was originally marketed as a replacement for paper drafting, as CAD software had not yet been widely adopted. However, its user base expanded greatly as the low cost and ease-of-use of this software application allowed it to become more common. AutoCAD is widely used by engineers, architects, drafters, geologists, surveyors, and other professionals. AutoCAD Architecture AutoCAD operates in a client-server architecture, with an AutoCAD Server, which runs on an operating system such as Microsoft Windows, Linux, or Apple Mac OS X, as the central piece of software. An AutoCAD client is a software application that communicates with the AutoCAD Server to provide AutoCAD functionality and updates. AutoCAD clients can communicate with a server via any one of three protocols: native file

transfer (for the most efficient communication between client and server), direct file transfer, and HTTP. Most people work in the native file transfer and direct file transfer modes; for example, MS Office 2016, Android, and iOS support direct file transfer. People who want to make sure they always have the latest updates to their AutoCAD client software, or who prefer not to download software updates over the network, should use HTTP. (This is what the browser does when it loads websites like this one).

AutoCAD Server Architecture AutoCAD is installed on one computer called the AutoCAD Server. AutoCAD client software communicates with the AutoCAD Server, either via direct file transfer or via the Internet.

AutoCAD Windows Terminal Server When you purchase a computer with an AutoCAD Server installed, it is usually a dual-boot computer, meaning you can run both Windows and AutoCAD simultaneously. However, if you wish to run AutoCAD and Windows simultaneously, there is a version of AutoCAD called the Windows Terminal Server. AutoCAD can run on your Windows computer as a Windows Terminal Server. All you need to do is to purchase a dedicated computer with Windows 7 or later and set it up to run as a terminal server.

AutoCAD Software AutoCAD runs

on a variety of desktop operating systems, including Windows, macOS, and Linux. AutoCAD clients communicate with a server via native file transfer or direct file transfer. AutoCAD for Mac is a native file transfer (NCF) client, so it works with an AutoCAD server that runs on a computer

used for selecting objects in the model. They include:

- vertex selection - Selects a single vertex
- edge selection - Selects a single edge
- face selection - Selects a single face
- edge loop selection - Selects a single face edge loop
- closed loop selection - Selects a single closed loop edge
- circle selection - Selects all vertices within a fixed distance of the cursor
- contour selection - Selects all vertices or edges intersecting a given contour
- region selection - Selects all objects intersecting a given bounding region

selection modes are the actions that are performed when an object is selected. They include:

- insertion - Appends a selected object to the selection
- elimination - Removes the selection from the model
- selection edit - Interacts with selected objects in a way that allows editing them
- selection undo - Undoes the last action on the current selection
- selection copy - Copies the selection to another object
