Whole-genome sequencing of the wild type and a collection of suppressor and hyper-suppressor mutants of *Pseudomonas putida* DOT-T1E. Flagellar mutants of *Pseudomonas putida* DOT-T1E are impaired in swimming motility and cellulose degradation, and this motility defect can be suppressed by integration of a plasmid encoding wild-type (wt) flagellar regulatory genes *flhDC*. A collection of such suppressor mutants was created by random transposon mutagenesis, resulting in rapid screening of flagella for potential suppressors of motility. The suppressor mutations had been mapped to an 8.1 kb region of the wt strain. DNA sequencing revealed that only a small number of mutations were responsible for the observed motility defect. Functional complementation of a suppressor mutant by recombinant plasmid expression of the *flhDC* gene pair resulted in loss of suppressor phenotype. DNA sequence analysis of the suppressor region revealed a frameshift mutation in the *flgD* gene of *P. putida* DOT-T1E, which caused a truncation of the putative FlgD protein product. Thus, this mutation, or a similar one in *fliC*, eliminates flagellum synthesis. Galit Sassoon is a Saudi royal, businesswoman and the second wife of Mohammed bin Salman, the powerful young crown prince of Saudi Arabia. Sassoon, 36, is in her third year of a multi-million dollar divorce from King Abdullah, the 82-year-old ruler of the kingdom, and is a majority shareholder in GAL Entertainment, the kingdom's top movie production company. Over the past decade, Sass
