This is the final release of Photoshop that will offer keyboard shortcuts for camera rotation, image and layer offsets, and image wrapping using the keyboard. We are currently working on adding this support in Photoshop CC 2015.2. At this time, we have not yet provided any date when this support will be available. As previously announced, this new licensing model removes the incumbent licensing limits that now restricts users to the following keyboard shortcuts:

- Ctrl+↑ Shift+ctrl+rotate
- Shift+ctrl+Z
- Shift+key
- (Image | Layers) | Rotate CCW
- Shift+Mouse

The release of Photoshop CC 2015.2 is the first version of the product to support GPU acceleration, so you can take full advantage of this technology while editing and staying efficient while doing so. Photoshop users also can take advantage of this new acceleration on the desktop, via a checkbox that will be available in the Photoshop window options while saving an image. You can toggle the checkbox to enable GPU-accelerated file copying, editing, and printing. In the next major release, Photoshop CC 2015.3, we will remove this restriction for users in countries outside of the US. We are watching to ensure countries that are a part of the International Adobe Partner Network are not affected by this change. Adobe's users in other regions may be able to use a US keyboard setup, as indicated above, or may require the operating system's defaults for compatibility.
