## Programs by File Type

Improvements to the app's accuracy have been added to the latest version of this app, but it would be nice to see a more useful search function. I haven't used it, but it looks like what you're describing. If you like the app, please consider leaving a review on the Windows Store. In most cases, the

---

improved search feature would require a major overhaul of the codebase to allow users to specify their own criteria for a search. Right now, it's actually not as intelligent as it seems to be, and it only works for registered programs (as you pointed out). This version of the program (v1.6) only searches registered programs - so the

---

SmartFinder will never find anything. In order to search for all installed programs, you need to use the Advanced version of SmartFinder.

Unfortunately, the SmartFinder only searches through the registry - it does not search your hard drive. So, it's unable to search for \*.exe files. It will only search through the

---

registry, and if a specific file doesn't exist within the registry, it will not be found. It's a shame, but the main reason the SmartFinder only searches through the registry is because I decided not to develop a search algorithm that searches both your hard drive and the registry. Currently, the SmartFinder only searches through the

---

Registry for programs that have a product key, because only those programs are registered. That means that you cannot look for registered apps that do not have a product key. The SmartFinder only searches through the registry for programs that have a product key. How to get hold of this one? I was using the version that's

---

always free when you log in and it does the same thing. You have to register for the free version, then you can use the paid version. Edit: Wrong link I've registered for the paid version and now the app doesn't do anything when I'm logged in. The app still has the free version, too. I haven't used it, but it looks like what you're describing. If you

What's New in the?

Portable Hidden Utilities XP is an application with a pretty self-explanatory name - it allows you to access some hidden utilities of Windows XP. Since this is a portable tool, installing Hidden Utilities

---

XP is not required. So, you can store the app on a storage device (like a USB flash drive), save it to any computer and directly run its executable file. What's more important is the fact that the Windows Registry does not receive new entries and no leftover files can be found on the hard drive after program removal. The interface of

---

the program is based on standard window where you can view apps in two categories - Windows and command-line utilities. So, you can select an entry from the list and launch it straight from Portable Hidden Utilities XP's interface. For example, you can run Registry Editor, Object Packager, Private Character Editor, Windows

---

Services, as well as the 'append', 'cmd', 'convert', 'sort' and 'replace' commands. In addition, you can click a link to check your IP address online. The tiny piece of software runs on a very low amount of CPU and system memory, has a good response time, and didn't cause us any problems during our testing, such as freezing,

---

crashing or displaying error dialogs. Unfortunately, you cannot use a search function to easily locate programs and commands. No recent updates have been made to the app.
