have been working for 20 years on these guidelines. A. 1. Eurocode 2 (2000) is a Standard Eurocode of 'Quality' for design of reinforced concrete buildings and structures. The following Guide to the construction and design of concrete buildings in Europe is based on Eurocode 2 of 2000. 1.1 Scope. 1.2 Structure. Eurocode 2:2000 (EC 2) is the latest European Standard on the design of reinforced concrete buildings and structures, replacing Eurocode 1:1979, Eurocode 1:1991 and Eurocode 1:2008. Eurocode 2:2000 was last

revised in 2000. Eurocode 2:2000 is the most important current Standard as there is no follow-up project. The key to a concrete building is to firstly ensure that the structure is stable to use and secondly offer a sustainable environment for use and preservation. First of all we can say that concrete buildings can be divided into two categories:

- Concrete structures are those in which the building's structural components are made of reinforced concrete, an inorganic material. Structures in this category include foundation walls, floor slabs, structural

beams, columns and roof slabs.

- Non-concrete buildings are those structures in which the building's components are made of other materials, mainly of wood or plastics. The most common example of non-concrete buildings is a wooden house (see figure 1.1). Eurocode 2:2000 is the latest 'European Standard' or code for reinforced concrete building construction.
