Geography by region: Siberia is the second largest landmass in the world. Only Greenland is larger. The area is larger than Iran, Turkey, Greece, Portugal, Belgium, and Liechtenstein combined. Siberia, dubbed the "The Land of the Soviets" and the "Siberian Tiger" in the 1980s Soviet Union, extends over more

than 6,000km (3,700 miles) of the Russian Far East. The main part is covered by tundra, a seasonally frozen permafrost area that is encroaching into Siberia due to the ongoing climate change. Small pockets of taiga or boreal forest, including the Lena Delta, Sakhalin Island, and part of the Chukotka Peninsula, remain in the far northeast. Topography is mostly mountainous, with an average elevation of over 2,000 metres (6,600 ft) above sea level. Annual precipitation ranges from 1,000 to 2,200 millimetres (394 to 902 in). The main rivers are the Ob, the Irtysh, and the Yenisey. The Lena River Basin is drained by the Lena and Ina Rivers. The region of Tyva is considered the traditional homeland of the Tuvans, a Mongolic people and one of the few remaining nomadic peoples in the world. Located just north of Mongolia, their traditional homeland spans the southern half of the

Republic of Tyva, the Uvanski Alatau, the Selenga River, and portions of the Vakhsh River basin. The Krasnoyarsk Krai is situated in the extreme east of the region, bordering Mongolia to the east and the Amur River and Japanese border to the south. The Trans-Siberian Railway passes through and crosses the Irkutsk Oblast in the center of the region. Siberia includes the European Russia
