List of USB form-factors This is a list of USB form factors. A USB form-factor is one of the physical types of USB interfaces used to connect USB devices to a host computer. The USB standard defines five form-factors, including the Micro-B, Mini-A, Micro-A, Mini-C,

and Mini-C Plus. Concepts
Micro-B The Micro-B
standard is the most common
type of connector and is the
same type as a USB A
connector. The micro-B plug
is a common connector for
USB hubs and peripherals
with a USB A interface,
allowing them to attach to a
host with a standard Micro-B
port as well as a USB A port.
The latest generation of USB
2.0 hubs use a micro-B
connector with a USB B
interface. Mini-A Mini-A is a

plug-in form factor used in a USB extension cable (see USB extension cables) for docking a peripheral, such as a printer, into a host (note, not computer) with a USB A port. The USB Mini-A Connector is a smaller, less-expensive plug than the Micro-B. It does not contain the four, four-polarity pins found in the Micro-B plug, but is still compatible with computers and peripherals that only accept Micro-B form-factor plugs. Some

laptops, such as the System 76 Alureon, use the Mini-A form factor in their USB ports, although they are merely USB-A ports with a Micro-B form-factor plug (which is then cut off and soldered to a cable that attaches to the adapter). Mini-C is a smaller, less-expensive plug than the Micro-B. It does not contain the four, four-polarity pins found in the Micro-B plug
