I want to send a big "Thank you" for this Photoshop review to the guy http://www.lesdeuxjours.com/photo-canada/ thanks again for this article, all the rest of these reviews are great too when you are crazy about this app. Also thanks to products on the photo store I found a way to save my EXIF data to my camera's card using this app. So far, my biggest issue with Photoshop is that it is everywhere at once. I have an Air currently. Setting up and using this program is a complicated process, but to me it is worth it. Same with the trial run. In the same way I hate to go into a store and search for exactly what I am looking for (or I do at least). I would rather make a profession out of this and know exactly what to look for… same goes for this issue. It does look like the program is geared towards the professional market though. My biggest suggestion for this program is to get the digital brush that is on the bottom left of the workspace. So far, I am loving how it paints on the Brushes. This is worth the free upgrade for sure. I am now looking forward to the new version of CS6. Adios… With the release of CS6, Adobe has upped the ante on photo editing performance. The speed at which you perform in-place edits or start a cropping operation is so efficient that it's a joy to work on images in your workflow. Photoshop's tools are far simpler and faster to use, too. Instead of being instructed to click and drag, Photoshop simply assumes you know what you're doing. Some tools are quicker than others, but you always hit the sweet spot with the overall product.

While photoshop capable of running in the browser, it is still nowhere near the same experience available in Photoshop. That being said, if you have not tried this yet, it could be a fun experience and will certainly make you more creative. Let's take a look at what the future of Photoshop looks like in the browser. First, you will notice the file menu there. If you have a subscription to Creative Cloud, you will be able to access your session on cloud. If you have not, you have to download the application. Once you have the application, you will be able to start to work with the software and start to create. Once you are done, you can save your work, jump to the next task, or go back. Even though it is not the same experience yet, moving forward with this new technology will undoubtedly make a drastic change to how Photoshop can be used. Normally, people might use the expected features out of the box, but I am here to present a different way of working with the software. I create bootstrap themes and work on code, so when I discovered the rebuild of Photoshop in the browser project by Mike over at MadeByMike.com, I was excited to have a browser based solution for the scripting language I was creating in. I read articles online about how he did it, and the whole process was greatly detailed. I took notes, and this is my own version of the project. If you are new here, be sure to check out the project first to give it a try. Once you are familiar with the implementation, here's the basics of what I used in my reimagined Photoshop and how I made it work: 933d7f57e6
