Developed and marketed by Autodesk, AutoCAD was first released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. AutoCAD is also available as mobile and web apps. AutoCAD® provides all the tools and skills you need to design great-looking construction and land-use projects on a wide range of scales. Use AutoCAD® to make 2D and 3D drawings for construction and building projects. Plan and design infrastructure, roads, water, sewer, gas, or electrical systems; indoor and outdoor flooring; architectural structures; and individual and multi-family buildings. Use 3D modeling tools and a variety of professional tools to create and modify models in different file formats, including DWG® (drafting) and DWF® (layout), FBX® (animation) and OBJ® (model exchange), or Revit® (design) files. Q: p:gmap does not update after route change I'm currently developing a dynamic map. If I select a route between two points, I want the map to update automatically and show the distance, the name of the city, the name of the route, etc. I have done this with several third party mappers that I have been using for years and it worked perfectly. But when I tried to use the official map of Google, I found that the method does not work. I think it's a problem of the Update/RouteSelectionListener method. But I don't know how to solve it. It is possible to get the name of the city where the route changes? This is my code:
