His first words to me were "Welcome, Rhon!" and I felt my heart warm to him. He was never one to limit his words to few, and he would often say things I heard him say in my dreams. The first time I realized that the Archdruid was a true kindred spirit was when I had a dream. I was in a dark, clean room, and the Archdruid was standing at the far end of it. I started walking toward him, and he smiled, and when I was within a few feet of him, he reached out his hand. I reached out for it, and as our hands touched, I woke up and knew I had just dreamt a part of the truth. It was the Archdruid's way of telling me that he was there for me, no matter what happened. It was the kind of word that I had yearned to hear from him, and I was so glad to know that in my dreams, he was saying just those things to me. I could only imagine how glad he was to have me in his dreams. It was a wonderful thing. I was never really sure how the Archdruid found me, or how the bond between us grew to where it was. For me, it started when I heard the Archdruid speaking as if I were the only one who could hear him. As a little boy, I would pick up the conversation as if he were a real person speaking to me, and I would stay up late listening to his words.

Most people are familiar with the basic operations of the operating system such as navigating through folders, viewing files, viewing installed programs, etc. The only thing that I have found odd about Windows is the inconsistency in the way that certain features and options are handled. One of the things that seem to surprise people is the fact that there are actually two different ways to open up a folder, depending on whether you are within Explorer or using some other application. I will point out that you can actually switch back and forth between the two ways in order to better understand the relationship between the two. One approach is the way that you are probably used to: open up a folder by right-clicking on it, selecting open from the context menu, and then being able to view the contents of the folder. When you open the context menu for a folder, however, the only item that appears is a way to share a folder in a network, which is not the way that you typically open up a folder. The other approach is the way that many people are used to for opening up a folder: by clicking the folder in the Windows folder list and then selecting the desired file. There is nothing spectacular about this approach, but it's something that you might not have thought of as being a way to do it. For me, the folder list gives you the choice of opening the folder in either the Explorer or some other application such as My Documents. When you open the folder in the Explorer view, you are presented with a list of items that you can view. When you open a folder in some other application, however, you are presented with a list of items that you can view. If you select one of the items in the list, you can then navigate within that application to view the contents of that item.
