6Rika Nishimura 3d, 7Rika nishimura female.Q: Converting a training sample to a test sample in pyspark I have a dataframe which contains certain words as a column. The dataframe contains only train data and not a testing sample. I want to convert this dataframe to a test sample. The test sample must contain all the words which I have in the original dataset, if the word exists in the test data then it should be included in the test sample else the word should not be considered. Is there any way we can do this conversion? A: Import your dataframe and replace all words with empty string, for example: from pyspark.sql import functions as F df.withColumn('word', F.when(F.col('word').isin(['a', 'b']), "").otherwise(F.col('word'))).show() # +---+---+---+---+ # |id|word|col3|col4| # +---+---+---+---+ # |1|a|2|2| # |2|a|3|3| # |3|a|4|4| # +---+---+---+---+ As you can see, words not in set are replaced to empty string. For any words in set to be included in result, just add another condition: df.withColumn('word', F.when(F.col('word').isin(['a', 'b']), "").otherwise(F.col('word'))).withColumn('word', F.when(F.col('word').isin(['a', 'b']), F.lit('c'))).show() # +---+---+---+---+ # |id|word|col3|col4|word| # +---+---+---+---+ 648931e174
